Animals should be vaccinated at certain times in their life with certain vaccines to promote correct immune system maturation and prevent disease. To this end we are providing the vaccine schedule and virus definitions on our website... After you have read the vaccine schedule document continue with the virus definition document to learn more about each virus and why vaccination is so important. Please print both documents for future reference. This document is intended as a reference only, and you should contact your personal veterinarian to seek advice or treatment for your pet.

Canine schedule highly recommended.

Corona/Parvo Combination Vaccine 6 weeks:

Distemper/Adeno/Lepto/Parainfluenza + Corona ("DA2LPP+C") 8 weeks:

DA2LPP+C Rabies Vaccine Kennel Cough Complex (injection) Lyme Disease 12 weeks:

DA2LPP+C Kennel Cough Complex (intranasal) Rabies 6 - 12 months: Kennel Cough Complex (booster) 16 weeks:

Annually Rabies Vaccine (booster)

Vaccination against Giardiasis is recommended for dogs having poor immune systems, if exposure is likely.

Vaccinations for ringworm are only occasionally used when an animal is not responding to normal treatment.

Feline schedule highly recommended.

Feline schedule highly recommended.

Distemper combination vaccine.

Begin as early as 6 weeks of age and repeat every 3-4 weeks until 16 weeks of age. Booster at 1 year after completion of initial series, then no more frequently than every 3 years.

Feline Infectious Peritonitis Vaccine 20 Weeks.

Feline leukemia

Begin as early as 8 weeks of age and repeat in 3-4 weeks. Booster at 1 year after completion of initial series. Continue annual boosters for those cats at risk of exposure.

Vaccination against Feline Leukemia Virus is recommended for cats living with an infected cat or cats that may be exposed by roaming.

Rabies

Given by your local veterinarian (age at vaccination may vary according to local law and type of vaccine). Revaccinate one year later, and then as required.

Annually:

Distemper (booster)

Feline Infectious Peritonitis (booster)

Feline Immunodeficiency Virus Vaccine (booster)

Rabies Vaccine (booster)

Vaccination against Feline Leukemia Virus is recommended for cats living with an infected cat or cats that may be exposed by roaming.
